Certified Professional in Portfolio Management (CPPM)

The Certified Professional in Portfolio Management (CPPM) certification is designed to validate a professional's ability to strategically manage a portfolio of projects and programs to achieve organizational objectives. This certification focuses on aligning investments with business strategy, optimizing resource utilization, balancing risk and value, and ensuring governance and performance measurement across the portfolio. CPPM emphasizes decision-making at the executive and enterprise level, enabling professionals to prioritize initiatives that deliver maximum business value.

CPPM equips candidates with practical frameworks, tools, and best practices used in modern portfolio management, including demand management, benefits realization, portfolio governance, and strategic alignment. The certification blends theoretical concepts with real-world applications, preparing professionals to manage complexity, uncertainty, and change across multiple initiatives. It is suitable for organizations adopting structured portfolio management to drive strategic execution and sustainable growth.

Target Audience

The CPPM certification is ideal for professionals involved in strategic planning, portfolio governance, and enterprise-level decision-making. It is well suited for Portfolio Managers, Program Managers, Senior Project Managers, PMO Heads, Business Leaders, Strategy Managers, and Consultants responsible for selecting, prioritizing, and overseeing multiple initiatives. Professionals seeking to move from project or program management into portfolio-level leadership will greatly benefit from this certification.

Additionally, CPPM is valuable for executives, directors, and functional managers who need a structured approach to evaluating investments, managing risk, and ensuring alignment between organizational strategy and execution. The certification is also relevant for professionals working in IT, finance, operations, government, and large enterprises where portfolio governance and value delivery are critical.

What Modules are covered?

Module 1 - Portfolio Management Fundamentals

Introduction to Portfolio Management and Enterprise Value
Relationship Between Portfolio, Program, and Project Management
Portfolio Management Lifecycle and Key Processes
Portfolio Components, Structures, and Categorization
Roles and Responsibilities in Portfolio Management
