ISO 55001 - Certified Lead Auditor

Course Outline

About IISO 55001 - Certified Lead Auditor Certification

The ISO 55001 Lead Auditor certification is a globally recognized standard focused on the most efficient management of assets within a company. It covers various aspects such as acquisition, operation, maintenance, and disposal of assets. This standard assists organizations in achieving strategic objectives by optimizing asset-based costs, risks, and performance. Industries use this certification to demonstrate competence in asset management, improve stakeholder confidence, and comply with legal and regulatory requirements. Attaining this certification involves in-depth understanding and application of the ISO 55001 standard's principles and guidelines to conduct and lead an effective audit within an organization.

This Asset Management System (AMS) ISO 55001:2014 Certification is designed to understand

What asset management means.
The benefits of asset management.
Best practices in asset management.
How to implement an asset management system in any organization.
