

Sample Exam

Exam Name: ISO/IEC 17020:2012 - Certified Lead Implementer

Exam Code: ISO-IEC-17020-CLI

1. Which scenario most clearly violates the principle of impartiality as defined in ISO/IEC 17020:2012?

- A. An inspection body refusing an inspection due to lack of competence
- B. A Type A inspection body providing consulting services to an inspected client
- C. A Type C inspection body conducting internal and external inspections with safeguards
- D. An inspection body maintaining confidential inspection reports

Correct Answer: B

2. The primary reason ISO/IEC 17020:2012 differentiates inspection bodies into Type A, B, and C is to:

- A. Define technical inspection methodologies
- B. Address differences in legal ownership structures
- C. Manage risks related to independence and conflicts of interest
- D. Establish different accreditation fees

Correct Answer: C

3. Which requirement best demonstrates that ISO/IEC 17020:2012 extends beyond technical competence?

- A. Calibration of inspection equipment
- B. Use of standardized inspection checklists
- C. Clearly defined organizational roles and responsibilities
- D. Application of sector-specific inspection methods

Correct Answer: C

4. A Type B inspection body must primarily demonstrate which of the following to maintain compliance?

- A. Complete legal independence from its parent organization
- B. Separation of inspection activities from inspected operations
- C. The ability to inspect external clients
- D. Accreditation under multiple ISO standards

Correct Answer: B

5. Which element of the management system most directly supports traceability and accountability in inspection activities?

- A. Personnel training programs
- B. Risk-based thinking
- C. Control of documented information
- D. Environmental condition monitoring

Correct Answer: C

6. During accreditation, the on-site assessment is primarily intended to:

- A. Validate inspection results issued to clients
- B. Verify implementation of documented procedures
- C. Replace internal audits
- D. Approve inspection pricing structures

Correct Answer: B

7. Which situation best illustrates effective control of nonconforming work under ISO/IEC 17020:2012?

- A. Ignoring minor deviations to maintain operational efficiency
- B. Documenting deviations and implementing corrective actions
- C. Reassigning inspectors without investigation
- D. Revising inspection scope without records

Correct Answer: B
